

Digital Literacy Project Report

Name: Shobhit Tiwari

Registration No.: 25MIM10233

Branch: Integrated M.Tech AI

Course Code: CSE0001

Introduction

This project is based on the concept of digital literacy and the responsibilities of a Student Digital Ambassador.

It focuses on understanding how students can use digital tools effectively, communicate professionally, and stay safe online.

Through different tasks, I explored platforms, created content, and learned practical skills that are useful for both academic and professional growth in today's digital world.

Task 1: Digital Literacy Infographic

For this task, I used Canva to design an infographic explaining digital literacy, safe internet practices, and professional online presence. The aim was to present information in a visually attractive and easy-to-understand way. One challenge I faced was summarizing large information into limited space, but it helped me improve my ability to present ideas clearly and concisely.

Task 2: Digital Portfolio

I created profiles on GitHub, LinkedIn, and Kaggle. GitHub is useful for uploading and managing projects, LinkedIn helps in building professional connections, and Kaggle is used for data science learning. I plan to regularly update these platforms with projects, skills, and achievements, which will help me in internships and future career opportunities.

Task 3: Platforms Exploration

I completed a beginner-level coding problem on HackerRank, which helped improve my logical thinking and coding skills.

Additionally, I created a Google Form quiz on digital literacy and connected it to a Google Sheet to collect responses.

These tools are helpful for learning, collaboration, and academic activities like surveys and quizzes.

Task 4: Email Etiquette

In this task, I learned the importance of professional communication. Poorly written emails without proper subject lines

or greetings can create confusion and may be ignored. Writing clear, polite, and structured emails ensures effective

communication. This is an important skill for interacting with professors and professionals.

Task 5: Cybercrime Awareness

I studied UPI fraud as a common cybercrime. I learned how scammers trick users through fake payment requests, phishing links,

and fraud calls. It was surprising to see how simple mistakes can lead to financial loss. I will ensure that I verify all

transactions and avoid clicking on suspicious links in the future.

Conclusion

This project enhanced my understanding of digital literacy, online safety, and professional communication. It helped me

develop practical skills that are essential for students in the digital age. I will continue to apply these learnings in my

academic and personal life.
